A Handful of Sailors

Henrik Alderborn   Isak Almgren   Anton Augustsson
Pontus Ljungren

March 2021

1 Deviations

- MVC: almost the entire projects are design with MVC but there are some minor deviations, which has not followed MVC.

- Single order: A customer can only order from table however we mimic a single order with the possibility to pay a single or multiple items.

- Languages: Almost every string is taken from the dictionary however there are some that we have missed and others that we did not manage to use in the dictionary for unknown causes.

2 Contributing members

2.1 Anton Augustsson

My responsibilities was staff, vip, login (with Henrik A), the model functions (like modelDB) and the main page with the mode switching also well as the header. I was also responsible for the meetings and the distribution of work loads.

2.2 Pontus Ljungren

My responsibility was Customer (with Henrik). At first, my main focus was to set up the structure of the site and basic functionality for actions that should be implemented on customer, such as clicking an item for more info, adding to the cart, ordering, removing an item from the cart, and changing the quantity. I also worked on implementing undo/redo for all functionality on customer. I did some debugging to find features on the site that didn't work as intended in connection to reviewing pull requests.

2.3   Henrik Alderborn

My responsibility was Customer (with Pontus), and therefore also the basis of VIP (which Anton finished). Customer has included implementation of the undo/redo, drag and drop, filters, dictionary, login, etc.

2.4   Isak Almgren

My responsibility was the manager part of the website. It has all the requirements for manager but not implemented UNDO/REDO or drag and drop.
